Tutorial Instalare LTSpice Varianta Windows pe un Mac OS X

Dudau Adrian Constantin 312 CD Anul I 22 Mai 2016 adrian.dudau@stud.acs.upb.ro

Facultatea de Automatica și Calculatoare

Am făcut acest tutorial pentru a ajuta toti utilizatorii de Mac OS X care au probleme cu gasirea unor alternative software pentru anumite pachete Windows. In acest model pachetul ales este LTSpice, dar și orice alt executabil poate fi portat prin aceasta solutie.

Acum orice student care va dori sa îsi foloseasca computerul Apple pentru a rula acest program poate sa o faca fara a mai fi nevoit sa foloseasca o masina virtuala care ocupa foarte mult spatiu pe disk. Pasi

1 - Descarcam cele doua produse software

Wineskin Winery http://wineskin.urgesoftware.com/tiki-index.php?page=Downloads

LTSpice varianta Windows (.exe) http://ltspice.linear-tech.com/software/LTspiceIV.exe

2 - Dezarhivam și deschidem Wineskin

3 - Instalam un engine pentru program apasand pe butonul de + de langa New Engines

🔴 🕘 💿 Wineskin Winery
Q Filter Engine List

+ - New Engine(s) available! Č
Wrapper Version
Wineskin-2.6.2
Wineskin-2.0.2
Update
Download Deakages Manually
Download Packages Manually
Create New Blank Wrapper

Orice versiune disponibila ar trebui sa functioneze. (De regula eu o folosesc pe cea mai noua. Aceasta este cea de mai sus)

4 of 12

Cancel OK	Cancel OK

4. Instalam cea mai noua versiune de Wrapper. La prima folosire a acestui program nu exista nici o versiune intalata asa ca veti face un update.

lineskin_262	
--------------	--

5. Creem un "ambalaj" pentru programul nostru. In acesta caz LTSpice, dar și orice alt program Windows va putea fi folosit. Veti observa ca de la un anumit pas, instalarea se va face ca pe o masina ce ruleaza Windows. Butonul este "Create New Blank Wrapper".

Denumim aplicatiea corespunzator

8. In cazul acesta alegem LTSpice. De aici orice alt installer Windows poate fi rulat.

Observatie! Este important sa nu schimbam locul de instalare! Acest "ambalaj" pentru OS X va contine oricum toate fisierele de simulare Windows și va seta o locatie de instalare implicita. Odata cu stergerea "ambalajului" sunt sterse toate fisierele instalate.

Cand programul va fi instalat fereastra de LTSpice va aparea implicit. Aceasta trebuie inchisa pe butonul de X rosu.

9. Dupa ce aceasta este inchisa, "ambalajul" va intreaba ce executabil din pachetul instalat trebuie simulat cand acest "ambalaj" va fi rulat din OS X. Vom alege executabilul scad3.exe. Daca se instaleaza alt program se alage executabilul corespunzator rularii acelui program.

10. Putem inchide Wineskin și rula prin dublu click "ambalajul".

Acest "ambalaj" poate fi mutat acum oriunde in OS X fara a ne face griji de locul instalarii. Absolut toate fisierele se afla in interiorul acestei "Iconite/ambalaj".
